

## CLAIMS

We claim:

1. A method of operating a thermal management system for thermally managing at least one electronic device, said method comprising the steps of:

providing at least one spray unit and at least one electronic device in opposition to said at least one spray unit;

spraying a fluid from said at least one spray unit towards said at least one electronic device, wherein said dispensed fluid has a spray characteristic; and

adjusting said spray characteristic to control a device temperature of said at least one electronic device.

2. The method of operating a thermal management system of Claim 1, including the step of increasing electrical power to said at least one electronic device if a device temperature of said at least one electronic device is below a desired temperature and decreasing electrical power to said at least one electronic device if a device temperature of said at least one electronic device is above a desired temperature.

3. The method of operating a thermal management system of Claim 1, wherein said fluid is comprised of a dielectric fluid.

4. The method of operating a thermal management system of Claim 1, wherein said fluid is comprised of a non-dielectric fluid.

5. A method of operating a thermal management system for thermally managing at least one electronic device, said method comprising the steps of:

1           spraying a fluid from at least one spray unit towards at least one electronic  
2 device, wherein said dispensed fluid has a spray characteristic; and

3           adjusting said spray characteristic to control a device temperature of said at  
4 least one electronic device.

5  
6           6. The method of operating a thermal management system of Claim 5,  
7 including the step of increasing electrical power to said at least one electronic device if  
8 a device temperature of said at least one electronic device is below a desired  
9 temperature and decreasing electrical power to said at least one electronic device if a  
10 device temperature of said at least one electronic device is above a desired  
11 temperature.

12  
13           7. The method of operating a thermal management system of Claim 5, wherein  
14 said fluid is comprised of a dielectric fluid.

15  
16           8. The method of operating a thermal management system of Claim 5, wherein  
17 said fluid is comprised of a non-dielectric fluid.
